LESS IS MORE

Ni-Cd batteries for maintenance free energy storage solutions
Ni-Cd Batterien für wartungsfreie Energiespeicherlösungen

Made in Germany

Less is more!

LESS maintenance costs

> **MORE** costs savings

LESS performance loss at high temperatures and during aging

> **MORE** durability

LESS recharge time

> **MORE** safety

LESS life cycle costs

> **MORE** cost effectiveness

Weniger ist mehr!

WENIGER Wartung

> **MEHR** Kostenersparnis

WENIGER Kapazitätsverluste bei Hochtemperaturanwendungen und während der Alterung

> **MEHR** Beständigkeit

WENIGER Zeit zur Wiederaufladung

> **MEHR** Sicherheit

WENIGER Lebenszykluskosten

> **MEHR** Kosteneffizienz

SINGLE CELL CONSTRUCTION

Konstruktion der Einzelzellen

Low pressure flame arresting vent

Niederdruckventil – flammenhemmend

GAZ® safety terminal

Redundant leak protection minimizes carbonate formation.

GAZ® Sicherheitspol

Zweifachdichtung minimiert Karbonatisierung.

Electrode edge

Connected to terminal by screwing or welding providing high mechanical stability.

Elektrodenfahne

Mit Polbolzen verschraubt oder verschweißt. Stellt hohe mechanische Stabilität sicher.

Electrode frame

Consisting of electrode edge and side bars. Seals the plates and acts as a current collector.

Elektrodenrahmen

Bestehend aus Elektrodenfahne und Seitenstegen. Verschließt die Platten und dient der Stromableitung.

Horizontal pockets

Formed by perforated steel strips containing the active material.

Horizontale Taschenplatten

Perforiertes Stahlband umschließt die Aktivmasse.

Fleece separator

Special fleece separator insulates the plates and improves the internal recombination.

Vliesseparator

Spezieller Vliesseparator isoliert die Platten und fördert die interne Rekombination.

GAZ® Ni-Cd battery range **lomain**™

Less is more! – Batteries for maintenance free energy storage solution

Based on more than 100 years of experience in design and manufacturing, **lomain**™ combines the well-proven GAZ® Ni-Cd pocket plate construction with the new GAZ® **lomain**™ battery concept. **lomain**™ batteries provide an exceptionally long lifetime and reduce maintenance requirements to a minimum. It is the ideal solution for applications requiring absolute reliability with the minimum of routine maintenance.

GAZ® **lomain**™ battery concept

lomain™ batteries provide a 20 year service lifetime. The special single cell design and the valve regulated venting system eliminate the need for topping-up during a normal service life depending on the float charge voltage and ambient conditions. On the basis of these features the batteries can be classified as maintenance free batteries within the standard operating conditions* as recommended by GAZ®. **lomain**™ cells are equipped with a low pressure flame arresting vent, permitting the topping-up of water if required. With a recombination rate of up to 90 %, depending on the float voltage and ambient conditions, **lomain**™ batteries leads to a significant reduction of maintenance costs.

GAZ® **lomain**™ improved chargeability at high temperatures

By a further developed technology **lomain**™ next generation of batteries has been significantly improved. **lomain**™ next generation of batteries is perfectly suited for high temperature applications with minimized maintenance requirements. It shows an excellent chargeability at elevated temperatures at a single step voltage charge. The range of batteries KGM ... P can be recharged to over 90 % of their nominal capacity within only 15 hours with a constant voltage charge of 1.43 V/cell and a current limitation of 0.1 I_tA.

Temperature performance

The continuous operational temperature of **lomain**™ batteries ranges up to +40 °C. Short term temperature fluctuations from -50 °C to +70 °C can be tolerated.

Quality Management System

The quality management system of our company has been certified since 1993. Strict quality controls, the use of high quality materials, the steady development of production processes and ultimately an uncompromising level of service to our customers exemplify the company history and philosophy. All major International standards are met, including IEC 62259, ISO 9001 and ISO 14001.

* Standard operating conditions are characterized by an operating temperature between -20 °C up to +40 °C and a limited float charge voltage with temperature compensation.

GAZ® **lomain**™ Ni-Cd Batterien

Weniger ist mehr! – Batterien für wartungsfreie Energiespeicherlösungen

lomain™ vereint die auf 100-jähriger Erfahrung in Konstruktion und Herstellung basierende Taschenplattenkonstruktion mit dem neuen GAZ® **lomain**™ Batteriekonzept. Dies führt zu der von GAZ® Ni-Cd Zellen bekannten extrem langen Lebensdauer gepaart mit einem Minimum an Wartungskosten. Batterien dieser Baureihe eignen sich besonders für Anwendungen, die absolut ausfallsicher sein müssen und ein Minimum an Wartung beanspruchen.

GAZ® **lomain**™ Batteriekonzept

lomain™ Batterien gewährleisten eine 20-jährige Lebensdauer. Durch ein spezielles Einzelzelldesign und das ventil-regulierte Entlüftungssystem ist kein Auffüllen von Wasser während der normalen Betriebsdauer in Abhängigkeit von der Erhaltungsladungsspannung und den Betriebsbedingungen vor Ort erforderlich. Auf Basis dieser Besonderheiten kann die Batterie als wartungsfrei gelten unter Beachtung der von GAZ® empfohlenen Standardbetriebsbedingungen*. **lomain**™ Zellen sind mit einem flammenhemmenden Niederdruckventil ausgestattet, welches bei Bedarf ein Wasser-auffüllen möglich macht. Mit einer Rekombinationsrate von bis zu 90 %, abhängig von der Ladespannung und Umgebungstemperatur, reduzieren **lomain**™ Batterien die Wartungskosten signifikant.

GAZ® **lomain**™ verbesserte Ladbarkeit bei hohen Temperaturen

Durch Investitionen in die Weiterentwicklung des **lomain**™ Batteriekonzeptes konnte die **lomain**™ – Baureihe wesentlich verbessert werden. Zusätzlich wurden die Leistungsdaten für hohe Temperaturen weiter verbessert, was zu einer exzellenten Ladbarkeit selbst bei einstufiger Konstantspannungsladung führt. Speziell die Batterien der Baureihe KGM ... P können in nur 15 Stunden mit einstufiger Konstantspannungsladung von 1,43 V/Zelle und einer Begrenzung des Ladestromes von 0,1 I_tA auf bis zu 90 % ihrer Nennkapazität wieder aufgeladen werden.

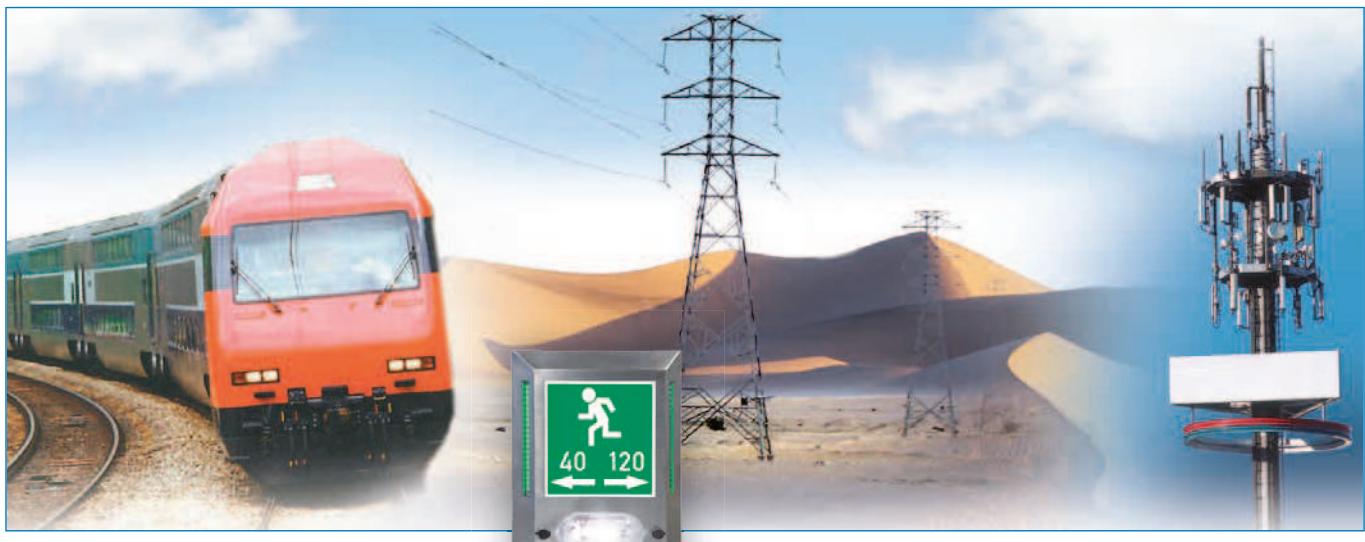

Temperaturinsetzbereich

Batterien dieser Baureihe werden in der Regel für Betriebstemperaturen von bis zu +40 °C eingesetzt, tolerieren aber kurzzeitige Temperaturschwankungen in einem Bereich von -50 °C bis +70 °C.

Qualitätsmanagementsystem

Das Qualitätsmanagementsystem unseres Hauses ist bereits seit 1993 zertifiziert. Strenge Qualitätskontrollen, die Verwendung hochwertiger Materialien, die stetige Weiterentwicklung der Produktions- und Betriebsprozesse und schließlich der exzellente Service für unsere Kunden stehen für unsere Firmengeschichte und Philosophie. So werden alle wichtigen internationalen Normen einschließlich IEC 62259, ISO 9001 und ISO 14001 erfüllt.

* Die Standardbetriebsbedingungen beinhalten eine Raumtemperatur zwischen -20 °C und +40 °C und eine begrenzte Erhaltungsladungsspannung mit Temperaturkompensation.

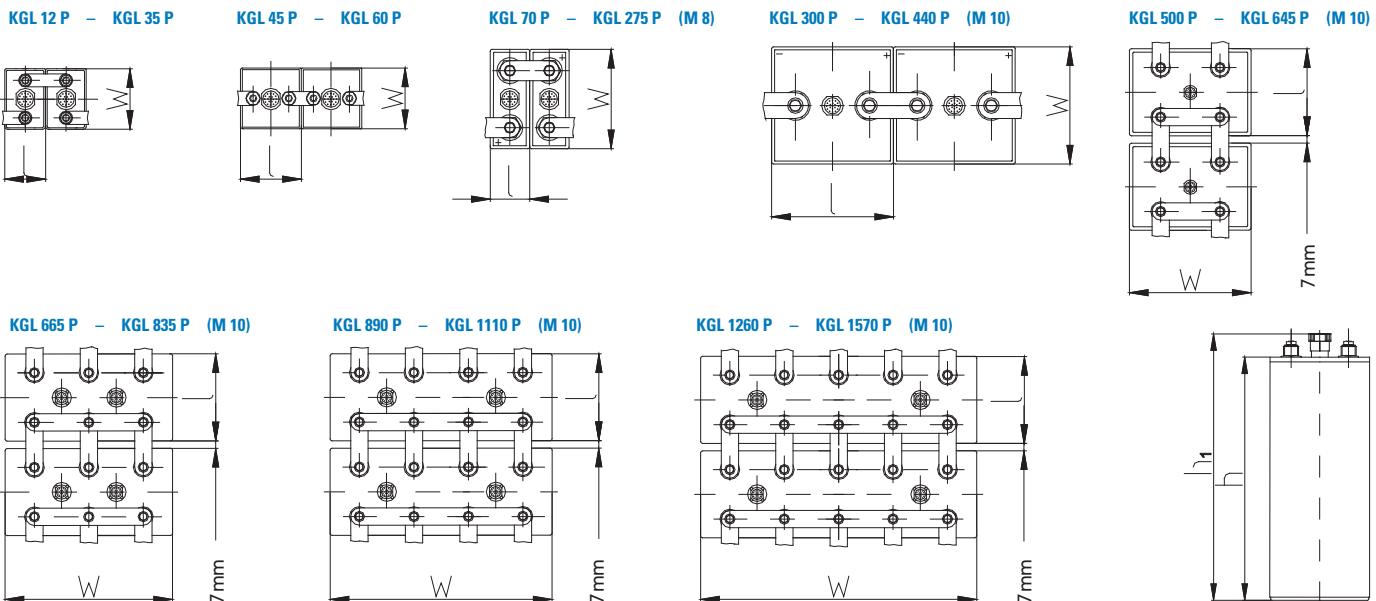

GAZ® lomain™ battery range KGL ... P

This GAZ® *lomain*™ cell type combines the well-proven Ni-Cd pocket plate design and the features of the GAZ® *lomain*™ battery concept. It is used for low rates of discharge over long periods (e.g. the current is relatively low in comparison to the total stored energy). The discharges can generally be infrequent and the recommended discharge time for the range of batteries KGL ... P is 1 hour to 100 hours.

Field of application

UPS systems, emergency lighting, process control, telecommunication, power and substations, oil and gas refineries, railroad signalling.

Battery Layout

Batteriebaureihe GAZ® lomain™ KGL ... P

Diese GAZ® *lomain*™ Ni-Cd Batteriezelle vereint die bewährte Taschenplattenkonstruktion mit allen Vorteilen des neuen GAZ® *lomain*™ Batteriekonzeptes. Batterien dieser Baureihe sind speziell für niedrige Entladeströme während relativ langer Entladedauer entwickelt worden. Die empfohlene Entladezeit für die KGL ... P Baureihe beträgt 1 Stunde bis zu 100 Stunden.

Anwendungsbereiche

USV-Anlagen, Sicherheitsbeleuchtung, Prozesssteuerung, Telekommunikation, Kraftwerke und Schaltstationen, Öl- und Gasraffinerien, Einsatz im Bahnbereich.

GAZ® lomain™ battery range KGMGMP... P P

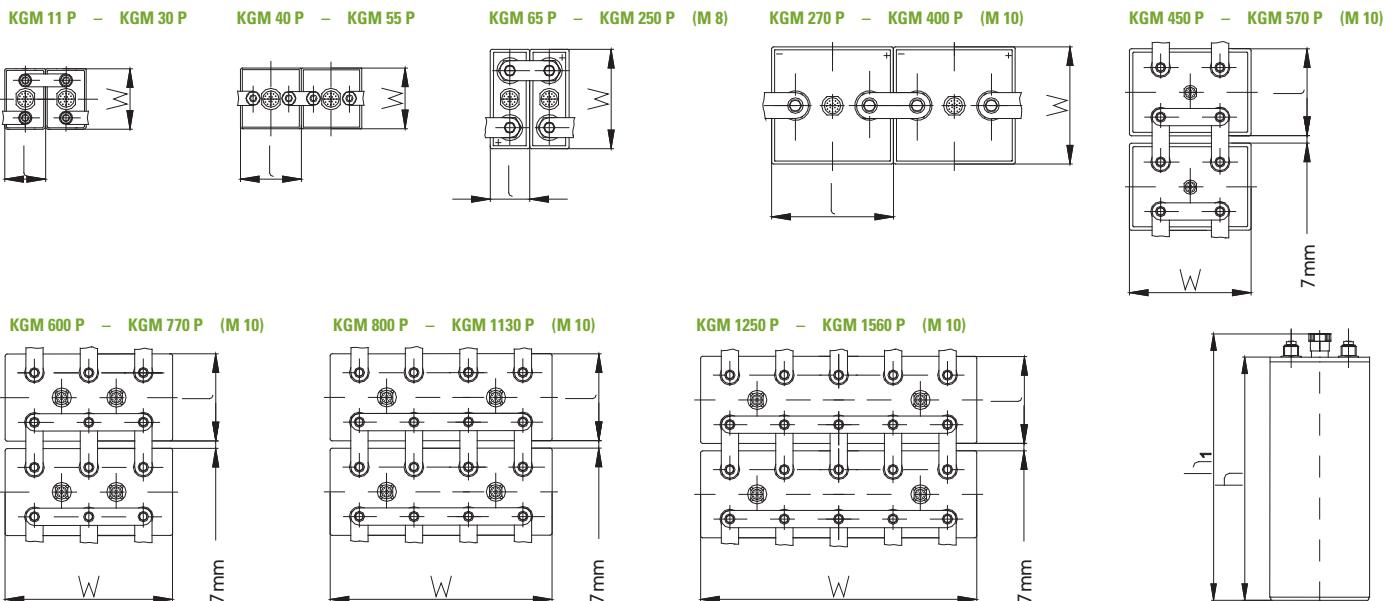

The GAZ® KGM ... P type of battery provides all the advantages of the Ni-Cd pocket plate design and adds the features

of the GAZ® lomain™ battery concept. It has been especially designed for "mixed loads" that include a mixture of high and low rates of discharge. It is used for frequent and infrequent discharges and the recommended discharge time is 30 min to 120 min.

Field of application

UPS systems, emergency lighting, process control, telecommunication, power and substations, oil and gas refineries, railroad signalling.

Battery Layout

The rated capacity C_5 is not the basis for the performance of the batteries. Always take into account that the performance depends on the battery construction, respectively on the different battery ranges. The cell size for specific application should be calculated according to actual recommended practice IEEE 1115 for stationary applications.

The rated capacity C_5 of **lomain™** range batteries is based on the available ampere hours (Ah) at a discharge rate of 5 hours to the final discharge voltage which is stated in the technical specification table per cell at $20\text{ }^\circ\text{C} \pm 5\text{ }^\circ\text{C}$.

Nominal voltage per cell is 1.2 V.

Discharging conditions

The discharge performances as well as the rated capacities C_5 given in this brochure are only valid for fully charged cells in accordance with IEC 62259.

Charging conditions

1. Two step charge

| | |
|---------------------|--------------------|
| Float: | 1.40 – 1.42 V/cell |
| Boost charge: | 1.45 – 1.46 V/cell |
| Current limitation: | 0.1 I_t A |

2. Single step charge

| | |
|------------------|--------------------|
| Standard charge: | 1.42 – 1.44 V/cell |
|------------------|--------------------|

Die Nennkapazität C_5 ist keine Bemessungsgrundlage für die Leistung. Die Leistung hängt von der Batteriekonstruktion bzw. von der Typenbaureihe ab. Für die Dimensionierung von stationären Batterieanlagen ist die aktuelle Empfehlung gemäß IEEE 1115 anzuwenden.

Die Bemessungskapazität C_5 der Baureihen **lomain™** basiert auf den entnehmbaren Amperestunden (Ah) bei 5-stündiger Entladung und auf den unter „Technischen Kenndaten“ angegebenen Entladeschlussspannungen pro Zelle bei $20\text{ }^\circ\text{C} \pm 5\text{ }^\circ\text{C}$.

Die Nennspannung pro Zelle beträgt 1,2 V.

Entladeverhalten

Die in unseren Tabellen angegebenen Entladewerte sowie die Nennkapazitäten C_5 beruhen auf ordnungsgemäß geladenen Zellen laut IEC 62259.

Ladebedingungen

1. Zweistufige Ladung

| | |
|-------------------|---------------------|
| Erhaltungsladung: | 1,40 – 1,42 V/Zelle |
| Starkladung: | 1,45 – 1,46 V/Zelle |
| Strombegrenzung: | 0,1 I_t A |

2. Einstufige Ladung

| | |
|------------------|---------------------|
| Standardladung: | 1,42 – 1,44 V/Zelle |
| Strombegrenzung: | 0,1 I_t A |

Wichtig: Eine höhere Ladespannung ist möglich, beeinflusst aber die Rekombinationsrate und führt zu einem höheren Wasserverbrauch als angegeben.
